A nomination form must be signed by the nominee and two nominators, and all three must be Full or Life Members of the Association and reside within the State in which an election is to be held.

Voting shall be by the members striking out the names of candidates on the ballot paper so as to leave only as many names of candidates as there are respective vacancies on Council for that State to be filled.

The Council shall have power to fill a casual vacancy. The member so elected shall hold office only until the next election.

THE OLSSON'S INDICATOR SYSTEM

HOW AND WHY IT WORKS

In the early 1920's it was found that animals given separately protein, energy and minerals and allowed to decide the proportions of each ingredient for themselves, out-performed those that were fed a fully mixed "ideal" ration.

Even today, although soil and plant analysis is available, these tests have little correlation to what is happening in the animal. Individual animals in fact, need different combinations of nutrients on any one day.

Thus it has been found that when we have a protein source, a dry feed supplement, a phosphorus and/or sulphur supplement and a protozoal retardant (Bentobite), each individual animal can select exactly which combination of nutrients it needs at that particular moment. The animal's physiological condition (pregnancy, lactation) also affects their nutritional requirements. Thus, if a herd of animals are at differing stages of pregnancy or lactation, the requirements throughout the herd will of course be different.

Using the **Olsson's Indicator System** of a combination of blocks, the pasture nutrient level can also be assessed. For example if growing animals or pregnant animals are grazing a pasture that is supplying sufficient nutrients for their needs, a protein source such as Peak 50 when put out will not be eaten. However, when the animals begin to eat the Peak 50 it indicates that, relative to their protein needs, the pasture is becoming deficient in protein. The condition of the animals will not appear to be affected to the naked eye, and so intervention can take place before any major loss of condition has occurred.

Three alternatives are then available to the producer:

1. They can move the animals to better pasture
2. They can provide more supplementation
3. They can sell

Using the Olsson's Indicator System and a range of blocks, rather than trying to force the animal to take all the nutrients in a fixed ration, gives better production for less money and allows each animal to feed individual requirements.

Also 3 or 4 blocks in combination does not mean that you will use 3-4 times the amounts of supplement. It means that you will use less. The Indicator System is a rational, intelligent use of technology.

If the animals do not eat the blocks, don't worry. This means that they don't need the supplement at that time. However if they do consume any one or two blocks, they are the blocks they need at that time. Therefore, these are the blocks to be supplemented. You will find that

needs vary from animal to animal, paddock to paddock and season to season. By supplementing in this way you will be in front of the animals needs and not behind it, in which case you will have to catch up. Consequently you will use less blocks overall because it takes more energy to put on weight than it does to maintain it. Criticism of supplement blocks is usually related to the fact that animals may consume different amounts. However, this is true of everything they eat and cannot be changed. In addition to this, absorption rates and individual requirements are variable. This leads to the assumption that individual animals are choosing what they need out of their feed and just because some don't eat a particular ration or product, does not mean that all the animals will not eat or will not need it.

"OLSSON'S... OFTEN LICKED, NEVER BEATEN"

HOW TO USE THE OLSSON'S INDICATOR SYSTEM

Select one block from each group below and replace when consumed.

Suggested Feeding Rate: Cattle: one block per 20 head.

Sheep/Goats: one block per 50 head).

GROUP 1:

A multi-nutrient protein/urea supplement such as Dry Season 10% &/ or 20% urea, Sulfos or Calcium Molasses 10% urea

GROUP 2:

A mineral supplement to balance the rumen ecosystem and to stimulate fungal breakdown of coarse fibres: Superphos, Megaphos, 12% High Sulphur, Cobb & Co, Lactovite + High Iodine and the Trace Element Series of blocks

GROUP 3:

A by-pass protein supplement when animals are pregnant, lactating or weaning such as Peak 50 or Lactovite

GROUP 4:

A bentonite supplement to increase availability of bacterial protein such as Bentobite or Lactovite New England

For seasonal conditions such as BLOAT and GRASS TETANY, use the following Olsson's formulations.

(Tip: put out well before the usual bloat/grass tetany season)

PEAK 50

A BY-PASS PROTEIN BLOCK FOR RUMINANTS NET WEIGHTS 16KG & 30KG

Aimed at ewes and lambs, cows and calves, Peak 50 is designed to provide protein in block form to assist pasture digestion and to keep breeding stock performing at peak condition during stressful periods and when feed rations do not provide sufficient protein.

Peak 50 without urea is available for horses and for conditions where urea is not required.

FEEDING INSTRUCTIONS: Remove outer carton and plastic cover and place near water troughs, dams and stock camps. Place out sufficient blocks to avoid overcrowding of stock. Initially, the consumption rate will be higher than average, but higher rates of consumption will drop after initial “gorging” period. Replace immediately when consumed.

CONSUMPTION GUIDE: The following rates will increase or decrease according to varying pasture conditions. Sheep: 50g/head per day
Cattle: 200-500g/head per day

CAUTION: Urea may be toxic when supplemented incorrectly. Please contact the Olsson’s Nutritional Advisory Service (FreeCall: 1800 804 096) before using this product for the first time.
